Are you considering new construction?

Goods-to-person fulfillment

Today's consumers live in an age of convenience. They now expect more product options and, most importantly, faster deliveries. For manufacturers, distributors and retailers, meeting these expectations can be a challenge, especially if their facilities are ill-equipped to keep up.

Developed with the modern consumer in mind, Cimcorp's 3D shuttle is a goods-to-person picking solution that answers the "need for speed" through innovative automation that accelerates fulfillment and logistics operations.

The automated advantage

A combination of rapid handling with ergonomic picking enables the 3D Shuttle to perform Just-in-Time (JIT) order fulfillment and meet very short lead times. It also enables a greater number of orders to be fulfilled per shift and improves workplace health and safety.

Accurate and cost-effective, the 3D Shuttle is perfect for industries where speed is critical to success, such as grocery, retail, e-commerce and third-party logistics (3PL). For instance, grocers can deliver fresher products to stores, thereby maximizing shelf life, improving customer satisfaction and reducing losses due to spoilage. Speed of delivery becomes a powerful differentiator in the eyes of consumers and, thus, a vital competitive advantage for Cimcorp customers.

High-density storage also eliminates the need for space-consuming aisles and massive conveyor sequencers. This allows for better space utilization, providing facilities with additional room for growth, while offsetting the costs for new construction.

See it in action

Can you meet consumer demand for speed?

Cimcorp streamlines the entire material flow of a distribution center or dispatch area

Together with our parent company, Murata Machinery, Ltd., we are able to combine a comprehensive portfolio of proven automated systems to create an end-to-end solution that enhances your business practices and competitive position—both today and into the future.

We can meet the unique warehousing needs of our customers across a range of functions from goods receiving and buffering to picking, replenishment, order consolidation, palletizing, loading and dispatch.

Is workplace safety a problem in your DC?

Do you need to improve order accuracy?

World-class experience

We have installed automated systems for manufacturers and distribution centers in over 40 countries across six continents.

This includes new construction projects, as well as retrofits to automate existing warehouse operations. For retrofits, we enable once completely manual facilities to optimize material flow, improve efficiency and better utilize space without having to uproot their business to keep up with changing market demands.

On each project, Cimcorp's experienced automation specialists work one on one with customers to evaluate their warehousing data and operations to determine the best areas for automation that will generate the biggest impact, at a minimal cost.
